EXPERIENCE

Full Stack Developer

Your Company Name

Jan 2022 – Present

- Developed and optimized a packaging order system using Angular and Java-Spring Boot, improving application performance by 60% through efficient caching and query optimization
- Led the development of the CO2 emissions calculation system for transportation, integrating Java-Spring Boot and Kafka for real-time data processing
- Designed and implemented the Optimizer module, a machine learning solution that improved planner efficiency by recommending quantities, and delivery dates
- Created and deployed RESTful APIs for multiple applications, ensuring seamless communication between front-end and back-end systems
- Managed end-to-end deployment processes, delivering stable and high-performing applications in production environments
- Streamlined system integrations by developing robust APIs and seamless data exchange across modules
- Technologies Used:** Java, Spring-Boot, Angular, TypeScript, AWS, Kafka, PostgreSQL, Maven, Bootstrap, HTML, CSS etc.

Application Developer

Your Company Name

Aug 2021 – Jan 2022

Remote

- Designed & integrated key dashboard components, including Internship Page, Assessment Page, Project Page, and Collaboration Page.
- RESTful APIs using Java 8 and Spring Boot for seamless data flow between backend services and the frontend.
- Built dynamic and responsive user interfaces using Angular, smooth navigation and improved user interaction.
- Ensured code quality through unit testing, code reviews, and adherence to best practices for clean and maintainable code.
- Technologies Used:** Java, Spring-Boot, Angular, TypeScript, Maven, Bootstrap, HTML, CSS, Microservices etc.

TECHNICAL SKILLS

Programming Languages

- Java, C, C++, Python, JavaScript, TypeScript

Frameworks & Libraries

- Spring MVC, Spring Boot, Spring Data JPA Apache Kafka, Maven

PROJECTS

1. Project Title

- Developed and maintained services using Angular for the frontend and Java Spring Boot for the backend.
- Performance Optimization: Enhanced caching mechanisms and optimized SQL queries with stored procedures, significantly reducing API response times and improving bulk load performance
- Internationalization: Performed language switching (English ↔ Mandarin) for the China users.
- End to end modules like Balances, Reimbursement, Cost Generation, Transport Management etc.
- Order Optimizer: Introduced a machine learning-driven tool to enhance planning by suggesting, estimating quantities, and optimizing packaging timelines

Technical Stack:

Frontend: Angular 12, HTML, CSS, Bootstrap, PrimeNG, NgRx

Backend: Java, Spring Boot 3.x, Spring Data JPA, Mockito, Kafka

2. Project Title

- Designed and developed the backend application for seamless integration between SCANIA and Proxio
- Kafka-based bulk data processing from Datalake, parsing data into JSON, and storing it in Azure Blob for calculations
- Scheduled jobs for data transfer, calculation verification, and result parsing, timely updates to the CO2 database and Datalake
- Integrated Azure Blob storage for handling intermediate files and calculation results

Technical Stack:

Java, Spring Boot, Spring Data JPA, Spring MVC, MySQL, AWS S3, Kafka Integrations

AWS ECS, Git-lab CI/CD, Postman for API testing, APIM

EDUCATION

B.Tech. (CSE)
CGPA

9.0
